

Nexus neonInsight™

Looking for a messaging solution that fits your company's need for secure business communication? Interested in a reliable and easy to manage solution that integrates easily with your existing infrastructure?

Experience. Nexus neonInsight™ is the result of over 25 years of experience providing bullet-proof Messaging and Collaboration solutions to some of the largest organisations in the world. neonInsight™ offers the latest in standards-based access to e-mail, contacts, calendar, tasks and notes from a wide variety of clients and devices.

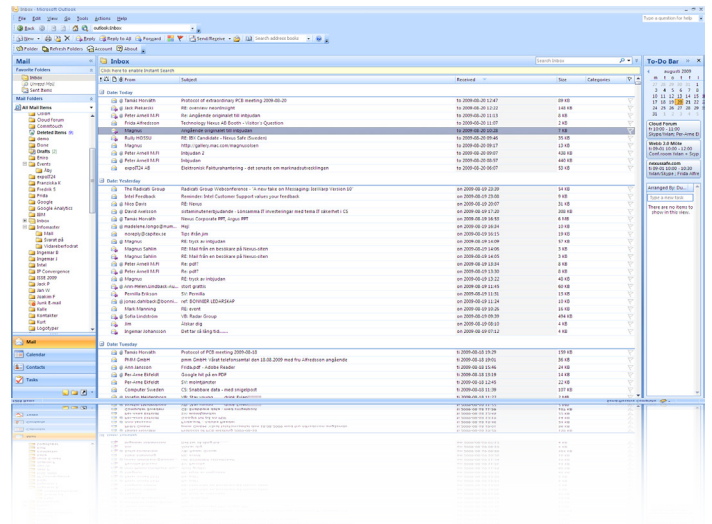

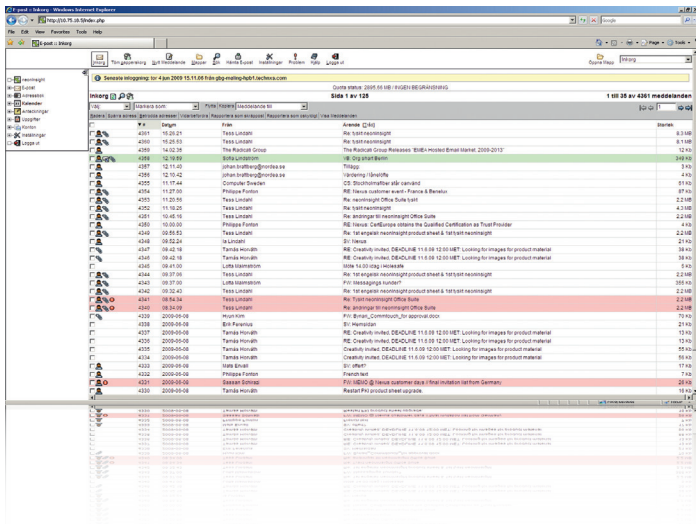

Reliable. E-mail is the most prevalent form of business communication today and for many companies, it is THE mission critical application. Most employees can happily continue to work when some applications fail, but when your mail server stops, business grinds to a halt. neonInsight™ offers a number of unique features as standard for increased reliability. File-system based storage provides robust data handling and saves you from the database headaches all too familiar with other solutions. Automatic on-the-fly backup and restore means your system is always ready when you need it. And the high-availability configuration provides automatic failover in the event of catastrophic hardware failure.

Flexible. neonInsight™ is designed from the start to fit your infrastructure, not to dictate it. Use the clients you want running on the platforms you want. neonInsight™ supports standards-based clients like Outlook Express, Thunderbird, Evolution, and even offers functionality to Outlook users similar to what they get from Exchange. It also supports many popular directory systems, for example Active Directory and Samba. Other features like single-domain/multiple server mail routing allow neonInsight™ to easily fit into or replace parts of your existing e-mail infrastructure.

Easy to Manage. neonInsight™ is an affordable, easy to manage, e-mail server designed for everyone from the smallest companies to the largest service providers. It provides a robust, centralized administration panel to easily manage the messaging environment, and many tasks may be set up to run automatically.

Cost Effective. The true measure of a system is not only how much it can do, but how much you have to do to get it. neonInsight™'s reliability features lead to less downtime, scheduled or unscheduled, and translates directly to savings in lost productivity and administrator load compared to other leading systems. neonInsight™'s ability to handle thousands of users on a single server reduce the hardware requirements and complexity of an installation, also resulting in direct savings. And neonInsight™'s unique single-instance message storage feature, one stored message regardless of the number of receivers, offers significant storage savings, often over 40%. neonInsight™ with appropriate operating and hardware systems, reduces the total cost of ownership (TCO) significantly by increasing the efficiency of your hardware.

Open standards. More and more companies are looking for solutions that support teamwork through open standards. neonInsight™ is a Linux based e-mail and collaboration server that sets the highest standards for messaging solutions. The use of open and industry standards offers compatibility with the widest selection of clients and devices, and fits seamlessly into your existing infrastructure. That means no integration headaches or costly vendor lock-in, which allows you to leverage existing administrator and end-user skills.

- Integrated Anti-Spam/Anti-Virus included
- Centralized administration and configuration from an intuitive web client
- On-the-fly system configuration–no restart needed
- Quota Classes for easy user quota administration
- Directory Independence
- Single-instance storage for significant storage savings
- File-system based storage for optimized performance and robustness (no database corruption and backup difficulties)
- Multi-level “delegated” administration
- CalDAV support for calendaring and free/busy Information.
- Migration tools

- On-the-fly Backup and Restore (don't need to shut down the system during back up)
- Restore down to the single message level
- Separate schedules for full and incremental backups
- Backup to local disk, a remote machine or tape drive
- Local send/receive
- Private Domains
- GUI Spam and Virus protection
- Single-Domain/Multiple system mail routing
- Unlimited Virtual Domains

About Nexus

Nexus works internationally with e-communication, security and information solutions. Our clients are companies and organisations for which IT and the Internet are essential to the management of sensitive information and knowledge. Nexus' business concept is to offer solutions, products and services that make the right information available to the right people, at the right time, wherever they need it in the world. We help our clients to not only protect their information, communication and knowledge, but also to create opportunities to make more effective use of them.
